1 GitHub Repositories

Figure 1: GitHub Logo

GitHub¹ is used to fork the Doubtfire API² and Web³ repositories and add our additions as need be to the codebase.

It is also used to host our Portfolio and documentation as a collaborative and interactive Wiki⁴, which are you reading now.

2 Slack Team Chat

Figure 2: Slack Logo

Slack is used for synchronous internal team communication. We are using the **Doubtfire Slack team**⁵ to send messages to each other and digitally discuss ideas when we are not all present.

Slack is as well as the primary form of communication with our client, is is always contactable via the Slack team.

⁵See <http://doubtfire.slack.com>

3 Trello Task Management

Figure 3: Trello Logo

Trello⁶ is an agile-based task management system used for asynchronous team communication and task management. We have a board⁷ used to organise both our development and organisation of the final year project, where each task is represented by a card. The task progresses through the board from the leftmost column to rightmost column.

4 Celtx Storyboard Editor

Figure 4: Celtx Logo

⁶See <https://trello.com/b/8a1k0Wud/helpdesk-ticketing-system>

⁷See <https://trello.com/b/8a1k0Wud/helpdesk-ticketing-system>

Celtx⁸ is an storyboard editor used to create interactive storyboards. It will be useful for creating a rough plan of all the shots needed to create our final year project video, and uses proper terminology and toolkits adapted to the filming industry standards.

5 Invision Prototype Toolkit

Figure 5: Invision Logo

Invision⁹ is a prototyping tool which can turn static images into iterative prototypes that can be tested on a device within seconds. It's rapid prototyping techniques allows for quick changes hassle free. While it is a paid service, it offers tools which are free for the team's needs.
